

What a **BRIGHT** idea!

Medium Voltage Cables with Water Swellable Yarn & Tape

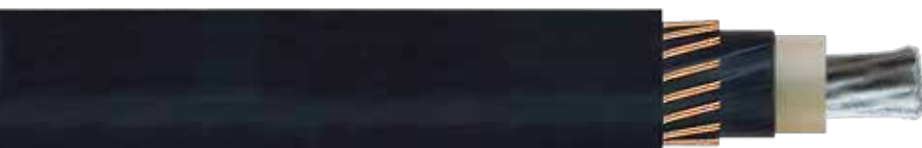

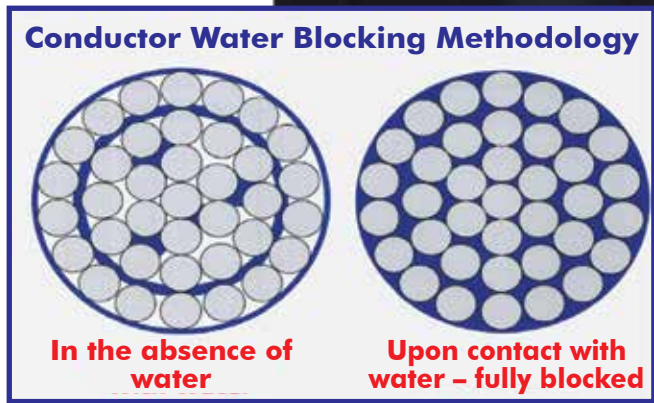

Developed by
Nexans Employees
Granted US Patent:
7,884,282 B2

Finally - an alternative to the sticky "compound" in the strands!

Water swellable yarn and tape are made with "superabsorbent" fibres containing carboxylates which form a gel when reacted with water. This gel expands and fills in the void areas between the conductor wires.

- Easy to Install
- Environmentally friendly (Green)
- Better Return for metal recovery (\$\$\$)
